

APPENDIX II

ABSTRACT OF THE DISCLOSURE

A fixing element of a motor vehicle unit for fixing a drive train to the motor vehicle frame has a unit holder on which the drive train is fixedly mounted. At least one crossmember reinforces the vehicle frame. With a mounting for mounting of the drive train, the one or more crossmembers and the unit holder are coupled to each other via the mounting and fixed as a composite construction to the vehicle frame. Thereby, moments resulting from the drive train can be compensated for by the crossmember.

Abstract

A fixing element of a motor vehicle unit for fixing a drive train to the motor vehicle frame has a unit holder on which the drive train is fixedly mounted. At least one crossmember reinforces the vehicle frame. With a mounting for mounting of the drive train, the one or more crossmember and the unit holder are coupled to each other via the mounting and fixed as a composite construction to the vehicle frame. Thereby, moments resulting from the drive train can be compensated for by the crossmember.
